TRS-80 OWNERS!

MACROTRONICS PROUDLY INTRODUCES M800 Deluxe RTTY System for the TRS-80

Look at these spectacular features

- Split-screen display. Compose and edit messages while receiving.
- Save received or keyboard entered messages on cassette and play them back at a later time.
- *Instant Replay* -- Repeat entire last transmission or retransmit received messages.
- Instant break operation - respond to a direct question (*Still Copy OK? BK*) without sending the transmit buffer. Then resume typing into the buffer where you left off.
- WRU--receive only messages directed to you, acknowledge *Station ready to receive*, then save message on cassette - all automatically. No operator intervention required. Receive messages while away.

■ Provision to call user programs from the M800 operating system. This feature will allow sending and receiving programs over the air, playing interactive games (chess, anyone?), sending real-time pictures (custom pix), auto contest logging /duping and more.

■ Instant callsign insertion. Enter other fellow's call just once, then press a single key to send entire ID exchange: W9XYZ Herb De Ron N6EE

- Direct output to your line printer or BAUDOT printer.
- Auto line numbering.
- Auto ID-RTTY and CW, CW only, or RTTY only.
- Auto left margin labeling.
- Auto carriage return/line feed-selectable carriage width.
- Auto suppress carriage returns and line feeds on receive to compact display.
- Output speed control-like the UT4-set as slow as you like to ensure uniform output rate and realtime editing.
- Four programmable messages of 255 characters each plus one *big* message limited only by RAM available (around 2.5 K on a 16K TRS-80). Save brag tapes, pix, etc. on cassette.
- Additional built-in RY, FOX, and CQ messages.

RECEIVE MODE: DUF 1234 0-72 5-45 B-HA BDU 00426 00426 38899
IT'S TOO DARN BAD THE DEDICATED HARDWARE SYSTEMS ARE SO UNFLEXIBLE. IT SEEMS I HAVE TO BUY A WHOLE NEW SYSTEM EVERY TWO YEARS AS TECHNOLOGY CHANGES. IT'S COSTING ME A FORTUNE! THE WORST PART IS THAT I HAVE A BUNDLE TIED UP IN THIS TERMINAL SYSTEM AND I CAN'T USE IT FOR ANYTHING ELSE. SURE WOULD BE NICE TO BE ABLE TO GET THE WHOLE FAMILY IN ON THE FUN. THIS SYSTEM CAN'T DO ANYTHING ELSE BUT RTTY AND MORSE CODE. WISH I COULD SAVE INCOMING MESSAGES ON CASSETTE AND PLAY THEM BACK LATER. ALSO WISH I HAD SOME WAY TO INSERT A CALLSIGN JUST ONCE INSTEAD OF HAVING TO INSERT IT AT THE BEGINNING AND END OF EVERY QSO.

YEA RALPH I DON'T HAVE THAT PROBLEM IN MY SHOCK. I HAVE THE TRS-80 GENERAL PURPOSE COMPUTER AND THE NEW M800 DELUXE RTTY SYSTEM. I DON'T HAVE TO WORRY ABOUT MY GEAR BECOMING OBSOLETE!!

- Four Baudot speeds (60, 66, 75, and 100 WPM) plus ASCII at 110 baud.
 - Auto transmitter control-keys PTT line. Fail-safe time-out circuitry for WRU.
 - Continuous display of mode, options selected, buffer available no. characters typed, no. characters ahead of buffer, and more.
- (MUCH MORE)**

Requires the M80 Ham Interface

Also recommended (not required):

- MLK-1 Loop Keyer Module **\$29.**
- FSD-1 Demodulator **\$99.**

M800 Hardware/Software / Manual \$99

Similar RTTY systems available for the PET, APPLE and EXIDY SORCERER. Write for our catalog of Microcomputer products, including Baudot and ASCII printer interfaces.

M80 Send-Receive RTTY & CW

- Auto send. & receive: RTTY & CW
- Complete hardware & software.
- Connects to TRS-80 User Port & Key / headphone jacks.
- 10 message memories - 255 char. ea.
- Keyboard buffer - allows typing ahead.
- Uses built-in PLL or external TU.
- Includes hardware, cassette & manual.
- Morse trainer - random 5 letter words.
- Requires Level II Basic & 16K RAM.

NEW FEATURES

- Auto-number contest keyer.
- Interactive Graphics.
- Auto-Transmitter control.

Assembled & Tested

\$149.

■ PET, APPLE, SORCERER versions available.

Write or Call for Complete Catalog.

VHF RTTY NEWS

Mike Stone, WBØQCD, P.O. Box H, Lowden, Iowa 52255

It will certainly be hard to follow in the footsteps of Arny Gamson, K6PZA former writer of this column, but I will do my best to continue in reporting VHF RTTY activity and related information. I am sure that I speak for all of Arny's readership when I wish him well towards a continued recovery. Your reports and articles indeed were a real pioneer effort towards the growing field of VHF RTTY communications.

Please allow me to introduce myself and give you some background information. I have been licensed since 1979 and have kept abreast of shortwave communications ever since my father bought me my first receiver back in 1963. At age 32, married, with two children, I have been in the sales field for the past ten years. I am very active on all bands with the majority of my time presently being on 10 and 20 meter phone, RTTY and slow-scan television. A member of Iowa's Navy-Marine Corps. Mars, I enjoy my share of DXing, both HF and VHF and have been President of 2 local clubs. I fathered Iowa's first regenerative TTY only 2 meter FM Repeater and Club which still operates at 146.10/70 Mhz out of the Quad-City area. I also enjoy HF RTTY a lot and you will find me around the 14.082.5 autostart frequency with Irv Hoff and the gang.

There are several areas of interest that I would like to cover in this column. Reader input is certainly requested. I would like to hear from all the VHF RTTY operators, repeater, club groups, experimenters, designers and builders etc. I will also blend

with this column a bit of history and nostalgia by bringing back the past popular "TAPE OFF THE FLOOR" segment which ran for many years in the RTTY JOURNAL issues back in the 1950's. Old articles or photographs will be appreciated and returned.

I had a very interesting conversation with **W9WWW** Henry Ruh, editor and publisher of "A5 ATV MAGAZINE" concerning the ARRL's apparent recent decision to omit RTTY, SLOW SCAN, FAST SCAN, FACSIMILE and other specialized communication modes from being listed or chaptered in their new 1979 "RADIO AMATEURS HANDBOOK". I mentioned to Henry my personal discussion on this matter with Harry Danna, **W2HD**, (president of ARRL), at the Dayton "ham-vention 79" and Mr. Danna had stated that he had heard this complaint from other operators and that it was simply a matter of limited room for printing. **W9NTP**, Don Miller (ATV experimenter and Central Division Director of ARRL) told me at the Peoria Hamfest in September that surveyed reports from its membership showed less than 1% responded interest in RTTY or ATV activity. This is why, I am told, that there are very few articles printed in QST magazine. One must keep in mind however, that ARRL does indeed recognize and gives its support to RTTY as in its VHF bandplans and daily broadcast **W1AW** RTTY bulletins. I encourage all RTTY and ATV buffs to write their feelings on representation in the new 1980 Handbook to: ARRL c/o Mr. Perry Williams, Membership Services Department, 225 Main, Newington, CN 06111 (send an

extra copy to the "VHF Advisory committee" as they do represent us at WARC).

Gene Bockman, **WA9LRO** reports that the Gridley, Illinois 146.10/70 voice RTTY regenerated repeater is again back on the air with 8 folded dipoles at 400 feet and a newly designed **WB9GYH** control system with UART and space tone activation. This system covers all the way across Illinois and into Iowa and well into Indiana. Gene is working on his 8080 computer and his newly acquired model 35 ASR and BTA-1 converter to "put on line" with the system. Keep up the good work Gene!

Bi-State Teleprinter Society, Davenport, Iowa has temporarily reconstructed their 10/70 repeater in the Quad-City area. Use narrow shift. **KH6 JEQ**, Tony in Hawaii confirms perhaps, a record and first? USB RTTY 14 Mhz. crossband/crossmode contact with **KC-JUY** and **WBOSAX**, Davenport via 146.10/70 FM repeater. Oh, I left out one minor detail--it took three stations to do the trick...(see FCC question and answer #5.) Can you imagine the disbelief of local autostart users when they read the "mail?"

Duane Fruchte, **W9HNC** reports that the Mississippi River Valley Repeater Club and their VHF RTTY Repeater on 146.10/70 Mhz. is alive and growing with activity. Located in Minnesota upon a hilltop location of **WBOZRH**, the repeater serves about a 50 mile radius. They are using a DT500 demodulator with UT2 regeneration and **W9-ZTH** Selcal control with a crystal controlled ASFK circuit. Live near

FROM
 THE
 MAILBAG

Each month I receive many club newsletters and I will try and share with you items from them. In The Stark County Ohio RTTY Newsletter I noticed the following: "The ARRL has in the new handbook dropped the section on RTTY. Maybe this is for the better. The League has always, in the past, devoted a few pages to this mode and had in the past few years the ST-4 terminal and the AK-1 AFSK. Granted these were good units in their time, but with LSI and other developments today, you would think they could come up with something better. It has also been some time since an article has been seen in QST. Wonder why?"

The Amateur Radio Research and Development Corp. (AMRAD) Newsletter contained the following, "ASCII considerations under docket 20777 the bandwidth docket, is on the FCC Commissioners agenda for September 27th, according to HR Report. Paul Rinaldo, W4RI, is planning to attend. Meanwhile, the lack of permission to use ASCII on the air has contributed to a reduction of amateur VHF RTTY activity. Many RTTYers have computers and have phased out their baudot gear. Phone-line data communications, on the other hand, is booming as witnessed by the number of computer bulletin board systems around the country."

In the El Cajon (Calif.) Amateur Radio Club Newsletter "COUNTERPOISE" the following article appeared: "TRS-80 on the air nets: West coast phone net, Sunday on 14,432.5Khz, WA6YKH is net control. CW net: Daily on 14,060 KHz at 0200Z. VEGAMW is net control. RTTY Net: Daily on 14,075 KHz at 0300Z 60 WPM 170 shift. WB6VGO is Net control. Credit is also given to SQUELCH TALES for this information.

H A N D B O O K F L A K

I have received many letters from readers of this column, who took the time to write to the ARRL about the 1979 Handbook. The deletion of RTTY-- and SSTV along with transmitting tube tables, base diagrams and semiconductor information was the main complaint in your letters. I think that your letter writing is going to pay off and the League will include the above deleted items in their new handbooks.

SCATS FAMILY PICNIC

The Southern California Amateur Teleprinters Society (SCATS) family picnic was held on September 8th at the home of Merrill Swan, W6AEE. Bob Smith, WB6ODR President of the San Diego Teleprinters Society and myself made the drive to Arcadia, California for this event. The chance to talk RTTY with the SCATS gang and Merrill was sure a lot of fun. Dale Sinner, W6IWO, President of SCATS and his club officers met with Bob and myself and discussed the lack of articles on RTTY in QST, and how best the RTTY gang can receive the recognition it deserves from the ARRL. I have reprinted with Dale's permission a letter he sent me. I hope it will stimulate more RTTY clubs to stand up and be counted.

SCATS

October 1, 1979
 George Hammon, WA6CQW
 14215 Pecan Park Lane SP # 73
 El Cajon, CA 92021
 Dear George,

I enjoyed meeting you at our SCATS picnic at Merrill Swan's home on Saturday, September 8. I know it was a long drive up to Arcadia from San Diego, but I hope you enjoyed meeting Merrill and many of our SCATS members. It was my pleasure to call to order

a special meeting of members and officers of SCATS, the president of the San Diego RTTY Society, Bob Smith, Merrill Swan and yourself. Your desire to represent the RTTY mode and its relationship with ARRL is an admirable task. I cannot think of any other medium which could best reflect the interests, desires, and goals of RTTY on a nationwide scale. My sincere hope is that all RTTY groups will come forward and support your efforts. From our meeting with you you can count on us for complete support.

RTTY is here to stay; each day we grow. Even CW is nearing our advanced state of transmission with super-speed keyers and code readers with video monitors. Our need for recognition is long overdue, but we have never complained much. However, times have changed, thousands of Amateurs now possess RTTY equipment, either in the form of mechanical machines, video terminal units or microcomputers.

We are always on the air. Here in the LA area our club owns and maintains an exclusive RTTY repeater. It is not unusual to have 20 to 30 users each day. Our repeater also sports a microcomputer on line 24 hours a day which is owned by one of our members. With computer on line, we know how many users we have each day on an hourly basis. As you know, with our autostart feature we need not be at home to receive a message and, accordingly, our answer back can be delayed hours and still be received by the first party. On the HF bands, I cite 20 meters between 14.080 and 14.100. Call any time when the band is open and instantly you are in QSO with someone, somewhere. Numerous RTTY contests are held each year,

most of which are sponsored by RTTY groups outside our country. However, our club SCATS, is sponsoring the Worldwide RTTY art contest. When it comes to emergencies, no one can handle as much information, as fast, and as accurately as RTTY users. Our only handicap being the need for electricity, but that problem can be solved.

The ideas presented at this meeting will, I hope, spur you on to contact all other RTTY and computer groups for their opinions and ideas. If we (SCATS) can help in any way, please do not hesitate to ask.

(signed)

Dale Sinner, **W2IWO**
President SCATS

I wish to thank Dale for his very fine letter. The warm hospitality the SCATS Officers and Members extended to Bob and I, made us feel right at home. Thanks again Dale, to you and your very fine club. I took the opportunity while steaks cooked on the barbecue's to talk with Merrill Swan. Merrill and I sat in his shack and discussed RTTY. The years of frustration for Merrill getting RTTY gear for the Green Key Bunch. Many of us owe so much to this pioneer in RTTY, from machines we use to the continuing fight for RTTY recognition. Merrill made his services available to the ARRL to edit technical articles on RTTY with little or no success. I hope we will never stop fighting for RTTY.

EMI

Electromagnetic interference is apparently becoming a real problem. The amount of electronic products being marketed for our homes and cars are not always compatible. Newspaper accounts daily point this out. The lady using her toaster--receives a local broadcast station, the motorist, who has the electronic fuel injection system affected by a mobil radio in a nearby car. The National Bureau of Standards is concerned about the growing number of radio and microwave emission sources and have suggested the need to establish electronic compatibility standards.

LOCAL LOOP

The monthly newsletter of the San Diego Teleprinter Society is called the "LOCAL LOOP" and is now being edited by Linda Canon, **KA6ENA** along with Ray LaBelle, **W6RUL**. The last issue was really super and I hope all members will send in items for them to print. Keep up the good work Linda and Ray.

ARTICLES

The need for a wide variety of articles for the RTTY JOURNAL is solicited each month. The JOURNAL is looking for cartoons, humorous happenings, pictures (RTTY or black and white photos), weekend projects, RTTY art, computer programs or anything that you would like to share with the readers of the RTTY JOURNAL. Sharpen up your pencils and let us hear from you.

QSL CARDS....

This month I received QSL cards direct from **TF3IRA** and **7P8BC**. I also received through the bureau QSL cards from: **HB9Z**, **OH2BH**, **G3UUP**, **JABADQ** and **DJ2YE**, thanks so much. I also received a QSL card from Richard Doering **WA6CFM/9**. Richard was an explorer scout in a post I was associated with in 1969. He is now working for Argonne National Laboratory after completing college with a degree in Physics and Economics. I am glad after all these years Ham Radio and the RTTY JOURNAL caused our paths to cross again.

To close out my column this month I hope you found it interesting and will drop me a line or two. In my next column I hope to have some input as the result of meeting with the Southwestern Director--Jay Holladay at the Southwestern Convention.

SO LONG FOR NOW

GEORGE, **WA6CQW**

Trempealeau, Wisconsin?? Try the repeater!

Received a nice catalog from **WA0UZO**, Bob in Pueblo, Colorado that offers a lot of money saving kit circuit boards, many for RTTY. Bob has a "RTTY" repeater on 146.19/79 Mhz. that doubles for voice use and employs a mark decoder and special disabling "time-out feature" for extended RTTY transmission use. Most of the station is homebrew based around Motorola "motrac" transceivers. His antenna system on the repeater is a bi-directional 12 element beam heading north and south for maximum coverage. Write to Bob for catalog information at POB 969, Pueblo, CO 81002.

"TAPE OFF THE FLOOR"

(EXCERPTS FROM VOLUME 1, JANUARY 1953

"Amateur Radio Christmas Gift" FCC announced on December 23rd 1952 its actions on dockets #10073 and #10173 giving a single channel 5 unit, 850 cycle shift emission privilege to "hams" effective February 18, 1953. No less than 55 and no more than 65 words per minute was the speed allowed.

"Southern California Radio Teletype Society" held its meeting at **W6LS QTH** with discussion on new VHF teletype frequencies 146.70, 146.10, 147.75, 147.85 Mhz. Shorty Griggs, **W6RL** has his RTTY-mobile station operating.

W2AEE, Merrill Swan heads the list of 73 California TTY operators roster listing.

"Horse Trades", **W6NAT** and **W6CL** are looking for Model 12 keyboards (did they ever find them????)

(Copies of old RTTY JOURNAL magazines are available via **W6OESF**, Red Wilson, see inside front cover.)

SEE YOU NEXT MONTH
MIKE

You can't tell how deep a puddle is until you step in it.

the exciting new INFO-TECH M-70 CODE/SPEED CONVERTER

The Info-Tech M-70 is a microprocessor based unidirectional simplex converter which will accept as an input: Loop, RS-232 or TTL signals at Baudot speeds of 60, 66, 75 or 100 wpm or ASCII speeds of 110 or 300 baud. The outputs of the M-70 are: Loop, RS 232 and TTL at Baudot speeds of 60, 66, 75 or 100 wpm or ASCII at 110 or 300 baud. With simple external switching, the M-70 can be operated half duplex in any mode/speed conversion combination.

A 1024-character buffer is provided for down-speed conversion, with buffer empty and buffer full status indicator outputs.

OTHER FEATURES:

- Auto-start output with two selectable formats: channel active, or space character detect
- Two programmable sel-cal (selective calling) outputs decode up to 7 characters each. (4 character turn off code)
- WRU output generated after detection of a string up to 7 characters long
- Selectable automatic C/R and L/F
- Selectable unshift on space (Baudot inputs only)
- Selectable bell defeat
- Selectable parity select (ASCII outputs only)
- Buffer Run/Load input

PRICE \$175.00 FOB ST. LOUIS.

The M-70 is a "Semi-Kit", including a completely assembled and tested printed circuit board with 22 pin, double side edge card connector, power transformer, complete schematic and operating information with several application examples. All that need be added are selecting switches, when options may want to be changed, indicating LED's, and a suitable cabinet or card rack position.

User Specified, Factory Programmed Options Include:

Selcal #1 = _____ Off = _____
Selcal #2 = _____ Off = _____
WRU = _____

Enter only one character per space, including non-printing characters, shown as follows (all spaces need not be filled in):

Figures = † Line Feed = L/F
Letters = ‡ Blanks = BLK
Carriage Rtn = C/R Space = SPC
eg. Selcal #1 = W † ‡ † K E BLK Off = N N N N

Please use order form supplied.

TELETYPEWRITER PARTS WANTED, for all machines manufactured by Kleinschmidt Hite and Teletype Corp., new only, also sub-assembled. I pay shipping. Phil Rickson, W4LNW, Rt. 6, Box 110362 Brooksville, FL 33512.

FOR SALE: HAL VIDEO DS-3000 V3 with Morse. New 6/25/79 perfect \$1,000.00 firm (new HAL on order). Murray Fisher W7WSU, 1011 Hobson, Walla Walla, WA 99362. 509-529-0916.

FOR SALE: RTTY DEMODULATOR, designed especially for the reception of short wave RTTY signals with various types of speeds and shifts. The PLL circuit is adapted automatically to the shift of the station received! Printing usual stations like press, military, amateur, diplo, weather, etc., is rather easy with this LED-controlled unit. Features: switchable audio filter; autostart relay; power supply 220 V AC 50 Hz; outputs: loop supply for mechanical RTTY machine, and/or TTL-compatible for VDU. Price, including packing and surface mail postage to anywhere in the world, DM 460.00 or \$260.00. Some more information is airmailed to you for DM 10.00 or \$6.00 this amount is credited on the final price of the unit if ordered later on. Joerg Klingenfuss, Goethestrasse, 14, D-7400 Tuebingen 1, West Germany.

THE DOVETRON TBA-1000 Baudot-ASCII Code Translator is designed to interface Baudot and ASCII circuits. I/O may be low level polar (EIA RS232C or MIL 188C) or high level neutral (active or passive). Parallel ASCII is also available. A preloadable 192 character buffer prevents character over-runs when down-converting baud rates. ASCII Control characters may be used to command peripheral equipment and functions. Features such as Unshift/Space, LTRS Only, Blank Diddle, Variable Character Rate, LED Memory Status Indicators and TD Inhibit are standard. Baudot speeds of 45, 50, 57 and 75 bauds are front panel selectable. ASCII baud rates of 110, 150, 300, 600, 1200, 2400, 4800 and 9600 bauds are internally selectable via a BCD coded DIP switch. All baud rates are crystal controlled and programming instructions are etched on the PC board. The 3.5" X 9.0" X 17.0" package is self-contained and available as a table top or rack mount unit. Power requirements are 115/230 VAC, 40-400 Hz, 10 watts. A bypass option is available. Amateur Net: \$395.00 FOB. DOVETRON, 627 Fremont Ave. South Pasadena, CA 91030.

MODEL ASR'S GEARED FOR 100 WPM, excellent \$300.00. Model 35 RO's \$350. Model 33 RO, \$250.00. Can ship. Gaston. 2117 Westlake Dr. Plano, TX 75075.

TELETYPE MACHINES AND Allied equipment. Send SASE for list. Model 28 three (3) speed receive only \$250.00. Model 28 ASR perforators, TD's, ROTR's, Modems, TWX's, Telex's etc., Antique Telegraph Instruments. Goodman, 5454 South Shore Drive, Chicago, IL 60615. 312-753-8342.

THE DOVETRON SSD-100 SOLID state cross display replaces the conventional CRT and associated high voltage power supplies as the tuning indicator in the MPC-Series RTTY Terminal Units. In addition to "instant on" operation and a predicted reliability in excess of 100,000 hours, the solid state display out-performs the original CRT in every instance. The absence (or deactivation) of the high voltage supplies and the resultant decrease in heat generation increases the MTFB (mean time before failure) of the terminal unit more than 10 times. The display itself consists of high intensity (4 millicandelas), red, rectangular LEDs (light emitting diodes) arranged in the traditional cross pattern and operated in a bargraph mode. The two LEDs that form the apex of the Cross are tied into the terminal unit's logic in such a way that they extinguish if the TU is improperly tuned to the incoming tones, or if the incoming signal is upside down in respect to the "sense" of the terminal unit. A separate LED in the upper left quadrant of the cross display monitors the two input channels and "flashes" in the presence of time or frequency dispersive multipath distortion, indicating that the Multipath Corrector should be turned on. Separate LEDs in two other quadrants monitor the status of the internal loop, the Signal Loss circuit and the Send/Receive mode of the terminal unit, making the SSD-100 a convenient display center of the various functions. A light sensitive photocell in the fourth quadrant monitors the ambient light conditions at the operating location and automatically adjusts the display's light output. Under normal conditions, the SSD-100 may be read comfortably from 75 feet. The new front Bezel contains an anti-glare optical filter and provides 30% more viewing area than the original CRT bezel. A retrofit kit (SSD-100K) is available to update existing CRT-equipped terminal units in the field. Your inquiry will bring complete details by return mail. DOVETRON, 627 Fremont Ave., (POB 267), South Pasadena California 91030.

THE RACK LINE BY DAYTAPRO, for individual or repeater these versatile uniform boards will do the job right. All boards are 4½" X 6½" (same as the DT-600) G-10 1 oz copper solder plated with a 22 pin edge connection. All kits have edge connector included. CW ID System, interfaced for digital, FSK or AFSK keying, 10 minute timer, variable speed (5-24 wpm) 12 or 5 volt use. Kit \$27.90, board alone \$8.95. MINI VERSION of above CW ID (CW ID only) Kit \$19.95. (NEW LOW PRICES). M4D power supply, plus 5 volts @ 1 amp with crow bar protection, plus 12 volts @ 1 amp and minus 12 volts at 1 amp. Each fused and has LED indication. Kit \$32.50, Board alone \$8.50. DUEL XB-6 crystal controlled clock for UAR/T control develops 6 baud rates each. Kit \$26.95, board alone \$8.50. CRYSTAL CONTROLLED AFSK. Now enjoy rock solid frequency with no drift. Kit \$28.49, board alone \$8.75. TU-LOOP POWER SUPPLY. Low voltage supplies (+5, +12 and -12) all rated at 800 mils each with a high voltage loop supply with the keying transistor located on board. Also has a 20 mil loop driver and keying provisions, input keying need be only 5 volts and ground. Kit \$52.49, board alone \$8.50. EXTENSION BOARDS (available in February 1980.) Two types. Straight for rack testing and 90 degree angle for cabinet testing. With edge connector Kit \$13.95. UT2B SPEED CONVERTOR Transitional autostart, on board clocks, parallel buffered outputs, FSK keying output and edge connector mounting to name a few of the options available on this basic speed converter. Complete board kit \$39.49. Thru plated board alone \$13.95. DAYTA PRO ELECTRONICS, INC., 3029 N. Wilshire Lane, Arlington Heights, IL 60004. Phone 312-870-0555 evenings. Add \$1.00 for shipping, VISA accepted

ISLANDS OF THE WORLD DX AWARD

1. This award is sponsored by Amateurs residing on WHIDBEY ISLAND, Washington.
2. This award is available to all Licensed Amateurs in the world.
3. All qualifying contacts must be made AFTER OCTOBER 1, 1977.
4. Mode of operation may be CW, SSB, or both...Special endorsement Certificates will be issued for SSTV, OSCAR, RTTY; Special endorsement also issued for making all contacts on one Amateur Band.
5. There are four classes of Island DX Awards: 50 ISLAND Contacts including WHIDBEY ISLAND
100 ISLAND Contacts including WHIDBEY ISLAND
150 ISLAND Contacts including WHIDBEY ISLAND
162 ISLAND Contacts including WHIDBEY ISLAND
6. ISLANDS qualifying as contacts for this award are taken from the "PREFIX BY COUNTRIES LIST" which is published in the Radio Amateurs CALLBOOK. Each island must also be recognized by the National Geographic Society.
7. Complete list of Islands that qualify for this award may be obtained by writing the Awards Manager. Please include and S.A.S.E.
8. To apply for the ISLAND DX AWARD, make a SELF-PREPARED list showing the ISLANDS Name, Callsign of the Amateur contacted, Band of Operation, Mode utilized, and the DATE of CONTACT. This list should be arranged in ALPHABETICAL ORDER BY ISLAND.....Lists received by Awards Manager in any other order must be returned to the sender.
9. DO NOT SEND QSL CARDS!!! INSTEAD, have your self-prepared list of contacts verified and signed by at least TWO AMATEURS General Class or above...IMPORTANT: Be sure the signatures are legible and they must include their call signs.
10. Send you VERIFIED LIST with \$1.00 and a SELF-ADDRESSED STAMPED ENVELOPE (Large) to the AWARDS MANAGER;
Bill Gosney, WB7BFK
4471 40th N.E. Street
Oak Harbor, Washington
WHIDBEY ISLAND U.S.A. 98277
11. Foreign Amateurs excluded the fee and stamps, but do send a 4 x 9½" Business size envelope for returning your award.
12. Rules governing this award will be reviewed annually on October 1st.

5 CONTINENT WORLD RTTY CHAMPIONSHIP

1979 - 1980

Sponsored by

I.A.T.G.-Radiocommunications

IATG-Radiocommunications and CD Publications in continuation of their more than 10 years of activity promoting the most advanced radioamateur techniques, have decided to sponsor a new series of contest for teletypers of all continents.

The purpose of the contest is not only to increase interest among radioamateurs for the radio teletype, but also to promote interest in long range contacts.

That is to stress intercontinental contacts rather than domestic and intercontinental contacts as in previous contests.

For this purpose IATG & CD have organized the following three contests:
AUSTRALIA-OCEANIA & ASIA RTTY FLASH CONTEST 3/4 November 1979.
NORTH & SOUTH AMERICA RTTY FLASH CONTEST 19/20 January 1980.
EUROPE & AFRICA RTTY GIANT FLASH CONTEST 9/10 March 1980.

For each of the three contests there will be a general winner plus a winner from each of the two continents involved.

Separate standing for each continent plus a general standing for each contest will be published in cq elettronica magazine and other magazines and points will be awarded as follows:

a) For contest winners: first place 50 points; second place 46 points; third place 43 points; fourth place 41 points; fifth place 40 points; etc.; 44 degrees 1 point.

b) For continental winners: (a.g. Australia-Oceania & Asia in the first contest) first place 25 points; second place 22 points; third place 20 points; fourth place 18 points; fifth place 17 points; etc.; 21 degrees 1 point.

Standing are independent. That is continental winners can also be general winners.

At the end of the three contests continental & general standing points will be totaled and a WORLD CHAMPION OF THE 5 CONTINENTS will be declared according to the new final standing obtained.

PRIZES: Grand prizes, as usual, are reserved for the four first place winners. Consolation prizes along with medals and certificates will also be awarded.

THE

FCC

In a letter dated 12/29/78 questions were presented to the Personnel Radio Division of the FCC in Washington DC concerning VHF Teletype-er situations A "Fast" 6 months later they responded. Herewith follow some of them:

Q. Would a RTTY repeater with tone-access be technically considered a "closed" repeater system even if it was open to all enthusiasts?

A. "It is our understanding that stations in repeater operation using "provisions to limit automatically" the access to the station (2125 or 2295) are generally referred to as "closed" repeater systems.

Q. Would the use of "autostart" circuit messages be considered "one-way communications" if not answered immediately?

A. "Although the vast majority of intercommunication occurs in "real time", the so-called "autostart" type of communication can meet this definition as long as the control operator of the transmitting station has reason to expect the intended receiving station was indeed receiving and recording the message so that the intercommunication could be completed at a later time. However, for the unattended receiving station to transmit an acknowledgement (SELCAL/WRU) would be a violation of 97.79b."

Q. Are bulletins to the RTTY community via autostart circuits permissible?

A. "If they are indeed of general Amateur interest and fulfill the requirements of 97.89b then they would be permissible as "one-way" communications.

The preceding questions and answers were "condensed" for use here and full actual worded copies may be obtained with a SASE. Thanks to Mr. George Petrutas, Chief, Rules Division, FCC, Washington, D.C. for his interpretations.

BUY YOUR RTTY BEGINNERS HANDBOOK \$4.50

NOW YOU CAN HAVE BOTH HIGH QUALITY & LOW COST!

The DS2000 KSR FROM HAL

HAL design experience now makes it possible to offer you an efficient, reliable, and cost effective terminal for your RTTY or CW station. Investigate the new DS2000 KSR from the people who KNOW HOW to build RTTY and CW equipment. See how you can get great performance and save money too!

- Integrated keyboard and video generator
- 72 character line
- 24 line display
- 2 programmable "Here Is" messages
- Automatic carriage return and line feed
- QBF and RY test messages
- Word mode operation, full screen buffering
- All 5 standard Baudot speeds
- 110 and 300 baud ASCII
- CW identification at the touch of a key
- Morse code transmit
- Morse code receive (optional)
self tracking speeds from 1-175 wpm on a separate plug-in circuit board (Available June, 1979)
- All in a convenient, small cabinet (14.1" x 9.25" x 4.35")

Price: \$449.00

Optional Morse Receive Board: \$149.00

Optional 9" monitor: \$150.00

BIG PERFORMANCE SMALL SIZE... SMALL PRICE

If you're looking for an RTTY demodulator with great performance on both the HF and VHF bands, take a look at the ST-5000 from HAL. The use of active filters with no phase-lock loop or 'single-tone' short-cuts ensure the kind of performance you expect. Full features in an attractive and conveniently small package make this demodulator a value that's hard to beat!

- Hard limiting front end
- Active discriminator
- Active detector
- Wide and Narrow shift (850hz and 170hz)
- Normal and Reverse sense
- Autostart
- Self-contained high voltage loop supply
- RS-232C voltage output (direct FSK)
- Audio tone keyer (AFSK)
- Provision for external tuning scope
- Attractive, small cabinet (2.75" H x 8" D x 12" W)
- Fully assembled and tested

Price: \$225.00

Arlington Heights, IL 60004

As we know, the FCC recently upheld its CW ID provision for RTTY stations. Like it or not we still have to ID every ten minutes. This means stopping the RTTY output and going to the key. Digital electronics has eased the burden of remembering to ID by means of automatic timers to warn an operator that ten minutes has lapsed. Auto CW ID's have taken us one step further by using the timer to trip the auto ID, thus we eliminate a step in the ID process. We no longer have to push the ID button every ten minutes. The problem now is that we must stop sending while the ID is sent, or it will interfere with our RTTY shifts if over 100 htz wide. Going to a narrower shift less than 100 htz. will eliminate interference to the RTTY output, but then one borders offending the FCC and ending up with more than an unwritten law.

UAR/T's with memory solved the problem of garble while IDing by stopping the memory output and storing RTTY data while the ID is being sent. So far this has been the best solution on the VHF bands for complete automatic ID'ing. It allows the operator to keep right on typing while his ID is sent every ten minutes.

Two meters is another story. Here we have AFSK (audio frequency shift keying). After installing the CARRS RTTY repeater in Chicago we figured the ID problem had been solved by our repeater. It would ID at 738 htz. while data was being sent thru the repeater. This totally eliminated interference to RTTY tones on the output. We had failed to realize the input station using the repeater would ID every ten minutes also. Even with the DT600/UT2 configuration some ID's would key the TU and UAR/T and we would get characters out when the input station ID'ed. Nothing worse than the "vknnnnank" between characters in a picture or between words.

Our solution was simple. Use the same circuit as used in the repeater

to generate a 738 htz. ID tone over the RTTY tones from the input station. The filters on the DT-600 or for that matter most TU's would never recognize the 738 htz. tone and therefore there would be no interference to the RTTY tones being sent. Now there would be no worries about the receiving station getting garble in a picture from your ID. There would be no reason to have to stop the tape or memory of the sending station. Even stations with keys could use this circuit and just key while sending the RTTY data.

HOW IT WORKS

A colpitts oscillator is employed to develop a stable 738 htz. tone. This tone is run to Q3 and keyed by Q1 and Q2. Thus each time point A goes high Q1 is turned on and Q2 is turned on which keys Q3 and allows the tone to go to the op-amp. The RTTY tones are brought thru R1 then thru R2 then to the op-amp, where they are mixed with the ID tones. -1 or more volts at point A will turn on Q3 and allow the ID to be mixed with the RTTY tones. 0 volts or ground at point A will turn off Q3 and only the RTTY tones will be heard on the output of the op-amp. The R1 and R2 combination will give a gain of 10 at minimum resistance. The R1 pot may be used as a level control for the input RTTY tones. R3 may be used as a level adjustment for the ID tones. The ID tone should be adjusted to be heard with the RTTY tones but not over them as it will null them out if adjusted too high.

Some experimenting should be done with another receiving station to make sure that the ID tones are not over-riding the RTTY tones. The .47 capacitor C1 was used to protect the op-amp from whatever the circuit is tied to.

With this circuit RTTY data may constantly be sent without interference from a CW ID. This eliminates the need to stop RTTY data for a CW ID

if automatically sent or if manually sent.

CONSTRUCTION

All the parts were put on a small circuit board 2 X 4 inches which could be easily piggy backed on the AFSK card already in use. The parts are all common and available from any electronic shop. Total current draw is about 5 ma when in use. Most TU's have the positive and negative supplies already built into them and the 5 ma draw will not pose much of an additional load to them. For your convenience a circuit board is available for \$3.50 or a complete kit for \$9.95 from Daytapro Electronics, 3029 N. Wilshire Lane, Arlington Heights, IL 60004. Total construction time should run about 1.5 hours from start to install in TU.

Some thanks for this unit should go to my close friend Bob Ehrhardt for his assistance in designing the circuit.

SALE! SALE! SALE! SALE! SALE! RTTY ID generator. Accepts 5 or 12 volt supplies, 31 characters available, (please include letters, figures, spaces etc.) Your preprogrammed answer-back must be supplied with order. **EXAMPLE: DE K9WRL NEIL ARL HTS ILL.** Board is the same size as the ST-6 boards. Was \$34.99 SALE PRICE \$24.95. Board alone was \$8.50 SALE PRICE \$6.95. Add \$1.00 for shipping. Daytapro Electronics, 3029 N. Wilshire Ln, Arlington Hts., IL 60004. VISA available. Phone orders 312-870-0555 Eves.

UT-4B KITS NOW AVAILABLE, All logic, resistors, capacitors, diodes and transistors to fill board, edge connector included. See November 1978 RTTY Journals for users report. Kit \$109.95, UT4B Board alone \$17.95. M4D power supply for UT-4B, Kit \$32.50, Board alone \$8.50. Duel XB-6 optional crystal clock for UT-4B Kit \$26.95, Board alone \$8.75. Additional info see above.....

DOVETRON

MPC-1000C

Multipath Correction
In-Band Diversity &
AFSK Tone Keyer

Amateur Net: \$545.00

Standard features include CONTINUOUSLY tuneable Mark and Space channels (1000 Hz to 3200 Hz), Dual Mode (MARK or FSK) Autostart and internal high level neutral loop keyer (20 to 60 ml). Both EIA and MIL FSK outputs are provided for direct interface to microprocessor and video terminal peripherals.

MPC-1000CR

Signal Regeneration &
Speed Conversion

Amateur Net: \$645.00

A front panel switch permits internal TSR-200 Signal Regenerator-Speed converter assembly to electronically "gear-shift" between 60, 67, 75 and 100 WPM. All incoming and outgoing signals are regenerated to less than 0.5% bias distortion. Also available with DIGITAL Autostart (TSR-200D): Amateur Net: \$695.00

MPC-1000R/- TSR-500

Dual UART Regeneration,
Speed Conversion, 200
Char. Memory, Word Cor-
rection & DIGITAL
Autostart

Amateur Net: \$895.00*

The MPC-1000R/TSR-500 provides Preloading and Recirculation of the 200 character FIFO Memory, a keyboard-controlled Word Correction circuit, Variable Character Rate, Tee Dee Inhibit, Blank/LTRS Diddle, a Triple Tone-Pair AFSK Tone Keyer and a Character Recognition/Speed Determination DIGITAL (DAS-100) Autostart mode.

*The MPC-1000R is also available without a TSR assembly and functions as a MPC-1000C with a Triple Tone-Pair AFSK Tone Keyer. This "Basic-R" permits future expansion with a TSR-100, TSR-200, TSR-200D or TSR-500 by simply lifting the lid and plugging in the appropriate TSR assembly: Amateur Net (Basic-R): \$595.00

Your QSL will bring complete specifications, or call: 213-682-3705.

SOUTH PASADENA, CA. 91030

MPC-1000R BY DOVETRON

MULTIPATH CORRECTION, IN-BAND DIVERSITY, SIGNAL REGENERATION,
UP-DOWN SPEED CONVERSION, 200 CHARACTER FIFO MEMORY,
KEYBOARD-CONTROLLED WORD CORRECTION & DIGITAL AUTOSTART

THE MPC-1000R REGENERATIVE RTTY TERMINAL UNIT

The DOVETRON MPC-1000R is a complete Transmit-Receive modem designed for optimum radio teleprinter communications on land, sea and in the air.

Standard features include a high level loop supply and keyer (neutral or polar), EIA and MIL FSK outputs, a phase-continuous AFSK Tone Keyer with three selectable Mark - Space - Shift tone pairs, Mark, FSK & Digital Autostart, Automatic Markhold, an internal RY Generator for terminal unit Self-Test and circuit adjustment, and a Signal Loss Alarm circuit.

The MPC Series is available in six different models to meet your exact requirements.

**Complete specifications are
available on your request,
or call 213-682-3705.**
